TITLE: Appts for adjusting longitudinal feed motion of  
carrier rails of  
transfer press - incorporating multistep gear for range  
setting and slotted  
pivot lever with a steplessly variable slider position for  
fine adjustment

INVENTOR: BLAU, P

ABSTRACTED-PUB-NO: DE 4324383A

BASIC-ABSTRACT: The appts. for adjusting the longitudinal  
feed motion of  
carrier rails of a transfer press incorporates a cam  
mechanism (1) driven by  
the press drive, and a multistep gear (10) between the cam  
mechanism and the  
carrier rails (14). The multistep gear (10), which is  
connected by means of a  
rack-and-pinion mechanism (8,9) and a connecting rod (7) to  
the pivot lever (3)  
of the cam mechanism (1), serves for stepped setting of the  
range of adjustment  
of the feed motion. Stepless fine adjustment, however,

takes place by  
variation of the position of the linkage point between the  
connecting rod (7)  
and the pivot lever (3) by means of a nut-and-spindle  
mechanism (6) and a  
servomotor (5).

Also claimed is a further appts. with variation on above.

USE - Used in transfer processes.

ADVANTAGE - The feed motion can be steplessly varied over a  
wide range with  
adherence to transmission functions specified by the cam  
mechanism.
